

NovaMed Solutions: Sales & Customer Performance Analysis

Pod Phoenix PowerBI Capstone Project

PROJECT OBJECTIVE

Analyse sales, profit, and customer behavior

Identify top and bottom performing drugs and customers

Provide actionable recommendations using PowerBI

DASHBOARD 1- TOP & BOTTOM ANALYSIS

Purpose is to identify:

- High and low-performing drugs
- High and low-value customers
- Monthly revenue and profit trends
- Areas of strong profitability and inefficiency

DASHBOARD- 2

CUSTOMER ANALYSIS

Purpose is to understand:

Customer demographics
and purchasing behaviour

Revenue distribution by
country and customer type

Average revenue per
customer segment

Geographic revenue
concentration

DASHBOARD 1: KEY INSIGHTS

Revenue and Profit Trends

- Revenue and profit fluctuate month-to-month, indicating seasonal or demand-driven variation.
- Profit does not always move proportionally with revenue, suggesting cost or pricing pressures in certain periods.

Top-Performing Drugs

- A small group of drugs (e.g., Doxycycline, Ergocalciferol, Lisinopril) consistently drive the highest revenue.
- These products also appear as top contributors to overall profit.

DASHBOARD 1: KEY INSIGHTS

Underperforming Drugs

- Bottom-performing drugs generate significantly lower revenue compared to top products.
- Some products contribute minimal profit while still consuming operational resources.

Customer Contribution

- Revenue is concentrated among a small number of top customers.
- Bottom customers contribute relatively low revenue, highlighting concentration risk.

DASHBOARD 2: KEY INSIGHTS

Customer Segmentation

- Preferred customers generate the highest average revenue per customer.
- New customers show strong potential.
- Frequent buyers generate lower average revenue than expected.

Demographic Trends

- Customers aged **35–54** and **55+** generate the highest revenue.
- Younger age groups (18–24 and 25–34) contribute significantly less revenue.

DASHBOARD 2: KEY INSIGHTS

Gender Distribution

- Revenue contribution varies across gender groups, indicating differing purchasing behaviour.

Geographic Performance

- Revenue is heavily concentrated in the top two countries.
- Several regions show lower revenue contributions despite market presence.

RECOMMENDATIONS

Prioritize High-Margin Drugs

- Improve inventory management for top performing drugs.
- Allocate marketing and promotional spend to high-margin drugs.

Review Underperforming Drugs

- Conduct cost-benefit analysis on low-performing drugs.
- Optimize pricing, bundle products, or reduce inventory where necessary.
- Consider repositioning the drugs by trying them out in other countries.

RECOMMENDATIONS

Focus on High-Value Customer Segments

- Retain preferred customers using loyalty and personalised pricing.
- Upsell to new customers early to increase lifetime value.

Target High-Revenue Age Groups

- Tailor marketing and product strategies to older and middle-aged customers.
- Develop targeted campaigns to increase adoption among younger demographics.

RECOMMENDATIONS

Strengthen Top Geographic Markets

- Increase investment in top-performing countries like Canada and Australia.
- Replicate successful strategies in underperforming regions like France and USA where feasible, adjusting pricing to fit local market and improve supply management.

- Diversify customer base and geographic revenue streams by expanding to other countries.
- Introduce discount sales for seasonal medications.
- Monitor shifts in customer distribution.

CONCLUSION

By combining product performance, customer behaviour, and geographic insights, NovaMed Solutions can make informed decisions to improve profitability, strengthen customer relationships, and support sustainable growth.

THANK YOU
